

SUMMARY

Software Engineer with 4+ years delivering enterprise and client-facing solutions end-to-end, from technical discovery and architecture through implementation, cloud deployment and production support. Track record spanning full-stack development, Azure cloud infrastructure, and applied AI (computer vision, NLP, GenAI), including unifying fragmented multi-vendor systems into single, production-grade platforms. Comfortable owning ambiguous technical problems directly with clients and translating operational constraints into shipped software.

CORE SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Bash
Frontend	Angular, React, HTML5, CSS3
Backend	Node.js, Express.js, Flask, REST APIs, Microservices
Cloud & DevOps	Microsoft Azure, Google Cloud, Azure DevOps, Terraform, CI/CD, GitHub Actions, Jenkins, Infrastructure as Code
AI & Data	Machine Learning, Computer Vision, NLP, OCR, Generative AI, Snowflake, MongoDB, PostgreSQL
IoT & Embedded	ESP32, Bluetooth, Embedded Data Collection, Sensor Telemetry
Engineering Practice	Software Architecture, API Integration, Systems Automation, Automated Testing, Git, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer / Technology Consultant — Accenture

Jan 2025 – Present · France

- Deliver enterprise and client-facing solutions spanning full-stack engineering, cloud, AI, IoT and industrial automation for clients including GSF, owning work from technical discovery and design through production deployment.
- Engineered a fleet-management platform for GSF unifying performance tracking of its cleaning-robot fleet across 5 distinct vendor clouds into a single interface, eliminating the need to log into separate vendor platforms and normalizing inconsistent data formats into one consistent model.
- Extended robotic fleet visibility with custom IoT telemetry, using ESP32 microcontrollers and Bluetooth-based data collection to capture operational data beyond vendor-provided platforms.
- Built and integrated frontend, backend and cloud applications using TypeScript, Angular, Python and REST APIs, and expanded into Azure solution architecture, CI/CD pipelines and Infrastructure as Code (Azure DevOps, Terraform) to move these systems from design to production.
- Drove a computer-vision initiative for a parcel-delivery client, running on-site discovery and operational video collection to define requirements, then engineering detection of packages and personnel to support operational governance and process oversight.
- Owned delivery for a biometric identity-verification solution, driving integration, architecture and security decisions directly with the client.
- Advanced firm-wide AI enablement through Responsible AI and AI governance initiatives, and led technical knowledge-sharing on AI-assisted software development across delivery teams.

Independent Software Engineer — Freelance

Jul 2023 – Dec 2024 · Tunisia

- Designed and delivered full-stack applications independently end-to-end, owning requirements, architecture, implementation, testing, deployment and release for each client engagement.
- Built web applications and backend services with TypeScript, JavaScript, React, Node.js and Express.js, integrating third-party APIs and external services into production systems.
- Automated development and deployment workflows with CI/CD, GitHub Actions and Jenkins, cutting manual release work and making deployments repeatable across projects.

Software Engineer — Talan Consulting

Sep 2022 – Jun 2023 · Tunisia

- Delivered enterprise data-management and planning tools for SNCF, combining software development with data workflows in Anaplan to support business planning processes.
- Built enterprise data integration and API-based workflows across data-platform environments, and automated recurring operational tasks to reduce manual effort.
- Diagnosed and resolved production incidents in coordination with client stakeholders, maintaining continuity of critical business processes.

Full Stack Developer Intern — Talan Consulting

Feb 2022 – Aug 2022 · Tunisia

- Built an AI-assisted HR sourcing and candidate-matching platform combining automated data extraction, document processing, NLP and machine learning with full-stack web development.
- Developed Python/Selenium extraction pipelines and NLP/ML candidate-matching workflows, integrating them into React and Flask applications backed by MongoDB via REST APIs.
